

Circuit symbols quick reference

Match each schematic symbol to what you'll actually see on the PCB before you solder.

SCHEMATIC SYMBOL		PCB FOOTPRINT / ROUTING
	Push button (SW) Closes the circuit while pressed	
	Resistor (R) Limits current, protects parts	
	LED Lights up when current flows one way	
	GPIO header pin Connects the Pi to the board	
	Wire junction Dot means wires are connected	
Routing colours:  Top-layer trace  Bottom-layer trace  Bottom-connected pin  Top-connected pin		

Bring this sheet to your soldering station — match the symbol before you match the wire.
